SUMMARY

Product builder with a software engineering foundation: two years shipping and supporting developer tools at MathWorks, an MBA in progress at IIT Delhi, and AI products built end to end, including a voice-agent CRM and an LLM decision engine. I own the full loop: talking to users, translating messy operations into specs and agent behavior, and measuring adoption in production.

EXPERIENCE

Digital Technology Program Intern

Apr 2026 – Jun 2026

GE Vernova

Bengaluru, India

- Owned adoption analytics for a Manufacturing Execution System used daily by 3,000+ shop-floor operators across 8+ global manufacturing sites.
- Diagnosed where operators dropped off through structured New Relic user-journey analysis; deployed a Power BI dashboard surfacing root-cause behavior patterns, enabling leadership at 8+ sites to prioritize targeted interventions.
- Built an AI agent that autonomously scans dashboard coverage gaps and generates site-specific insights, replacing hours of manual analysis per site with automated reporting for regional leadership.

Associate Software Engineer, Data Acquisition

Aug 2024 – Jun 2025

MathWorks India Pvt. Ltd.

Bangalore, India

- Developed the interface between MATLAB and data-acquisition hardware in the Data Acquisition Toolbox, used by 10,000+ customers; shipped C++/MATLAB fixes across 3 consecutive releases (R2024b, R2025a, R2025b).
- Cut core data-acquisition algorithm runtime 30% by profiling and redesigning underlying logic, directly reducing friction for enterprise clients in automotive and semiconductor sectors.
- Delivered a remote hardware-demonstration platform for the sales and marketing organization, letting prospects operate real lab hardware remotely; presented product demonstrations to 25+ key enterprise clients.

Associate, Engineering Development Group

Jul 2023 – Jul 2024

MathWorks India Pvt. Ltd. (50% customer-facing, 50% software development)

Bangalore, India

- Resolved 100+ technical support cases for MATLAB and Simulink at a 90%+ resolution rate across 30+ industry domains, from automotive to semiconductors to academic research.
- Synthesized 70+ customer queries into structured market-requirement signals; presented data-driven insights that informed product-team roadmap prioritization across releases.
- Redesigned cross-team feedback workflows in MS Teams, cutting cycle time 40% across a 10-member group spanning engineering, QA, and product.

PROJECTS

SampoornaCRM — AI Voice CRM for Real-Estate Teams

2026

- Created an AI voice-agent CRM for Indian real-estate teams: agents speak in their own language and the system logs the call, updates the lead, and books the follow-up; includes click-to-call, WhatsApp, listings, and workflow automation.
- Anchored the product in the field's core adoption problem: agents live on the phone and avoid data entry, so leads decay in notebooks and follow-ups slip; voice-first capture removes the data-entry step entirely.

Trinetra — Deterministic Crisis-Simulation and Decision Engine

2026

- Developed a client-side simulation replaying the 2026 Strait of Hormuz crisis across India's crude supply chain: signal feed, exposure-graph re-scoring, and option generation across 5 decision levers.
- Architected an agent pipeline with an LLM proposer, zero-LLM critic, and deterministic arbiter, plus a hash-chained audit trail; every output carries data provenance and replays are byte-identical.

CaseCompass — MBA Case-Prep Platform (casecompass.in)

2026

- Drove the full product lifecycle (user research, personas, structured prep journeys; Next.js, TypeScript, Supabase) and launched an AI interview simulator that uses engagement telemetry and percentile cluster analysis to personalize preparation.

EDUCATION

MBA, Department of Management Studies, IIT Delhi

2025 – 2027 (expected)

- Campus Finalist, American Express Campus Challenge 2025 (Decision Science Track): sole team selected from DMS IIT Delhi; competed against 500+ teams from premier B-schools.

B.Tech, Electrical Engineering, MANIT Bhopal — CGPA 8.21/10

2019 – 2023

- Primary author of an IEEE-published research paper: regression-based battery-life forecasting model with 90% accuracy from State-of-Health data, trained on 200+ simulated charge-discharge cycles.

SKILLS

AI & Agents: Claude, ChatGPT, OpenRouter, prompt engineering, agentic workflows, LLM evaluation

Engineering: Python, SQL, TypeScript, Next.js, Supabase, AWS, C++, MATLAB, Git, ETL

Product: Product management, user research, PRD and spec writing, telemetry and adoption analysis (New Relic, Power BI), roadmap prioritization, customer demos and support

Achievements: CAT 2023: 99.74 percentile, DILR · JEE 2019: 99.74 percentile, Physics · Promoted early at MathWorks
